

Running a Colab Notebook

This repository contains a Colab notebook that you can run to perform a specific task. To run the notebook, follow these steps:

1. Open the notebook file (example.ipynb) in Google Colab by clicking the "Open in Colab" button at the top of the page.
2. Once the notebook is open, click on the "Connect" button at the top right corner of the notebook to connect to a Google Colab runtime.
3. Run the notebook cells by clicking on the "Run" button next to each cell or by using the keyboard shortcut Shift + Enter. Make sure to follow the instructions in each cell carefully.
4. After running the notebook, you can download the output files to your local machine by clicking on the "Files" tab in the sidebar and then clicking on the "Download" button next to the file you want to download.

That's it! If you have any questions or issues, feel free to open an issue in this repository.
